Findings

Missing security header: Content-Security-Policy

port 443/tcp

CONFIRMED

URL	Evidence
https://hub.a2sv.org/	Response does not include the HTTP Content-Security-Policy security header or meta tag Request / Response

Details

Risk description:

The risk is that if the target application is vulnerable to XSS, lack of this header makes it easily exploitable by attackers.

Recommendation:

Configure the Content-Security-Header to be sent with each HTTP response in order to apply the specific policies needed by the application.

Classification:

CWE : CWE-693
OWASP Top 10 - 2017 : A6 - Security Misconfiguration
OWASP Top 10 - 2021 : A5 - Security Misconfiguration

Missing security header: X-Content-Type-Options

port 443/tcp

CONFIRMED

URL	Evidence
https://hub.a2sv.org/	Response headers do not include the X-Content-Type-Options HTTP security header Request / Response

Details

Risk description:

The risk is that lack of this header could make possible attacks such as Cross-Site Scripting or phishing in Internet Explorer browsers.

Recommendation:
We recommend setting the X-Content-Type-Options header such as `X-Content-Type-Options: nosniff` .

Classification:
CWE : CWE-693
OWASP Top 10 - 2017 : A6 - Security Misconfiguration
OWASP Top 10 - 2021 : A5 - Security Misconfiguration

Missing security header: Referrer-Policy

port 443/tcp

CONFIRMED

URL	Evidence
https://hub.a2sv.org/	Response headers do not include the Referrer-Policy HTTP security header as well as the <meta> tag with name 'referrer' is not present in the response. Request / Response

Details

Risk description:
The risk is that if a user visits a web page (e.g. "http://example.com/pricing/") and clicks on a link from that page going to e.g. "https://www.google.com", the browser will send to Google the full originating URL in the `Referer` header, assuming the Referrer-Policy header is not set. The originating URL could be considered sensitive information and it could be used for user tracking.

Recommendation:
The Referrer-Policy header should be configured on the server side to avoid user tracking and inadvertent information leakage. The value `no-referrer` of this header instructs the browser to omit the Referer header entirely.

Classification:
CWE : CWE-693

OWASP Top 10 - 2021 : A5 - Security Misconfiguration

Robots.txt file found

port 443/tcp

CONFIRMED

URL
https://hub.a2sv.org/robots.txt

Details

Risk description:
There is no particular security risk in having a robots.txt file. However, it's important to note that adding endpoints in it should not be considered a security measure, as this file can be directly accessed and read by anyone.

Recommendation:
We recommend you to manually review the entries from robots.txt and remove the ones which lead to sensitive locations in the website (ex. administration panels, configuration files, etc).

Server software and technology found

port 443/tcp

UNCONFIRMED

Software / Version	Category

web-vitals	JavaScript libraries, RUM
HTTP/3	Miscellaneous
Next.js	JavaScript frameworks, Web frameworks, Web servers, Static site generator
React	JavaScript frameworks
Vercel	PaaS
Webpack	Miscellaneous
Cloudflare	CDN
HSTS	Security

Details

Risk description:
The risk is that an attacker could use this information to mount specific attacks against the identified software type and version.

Recommendation:
We recommend you to eliminate the information which permits the identification of software platform, technology, server and operating system: HTTP server headers, HTML meta information, etc.

Security.txt file is missing

port 443/tcp

CONFIRMED

URL
Missing: https://hub.a2sv.org/.well-known/security.txt

Details

Risk description:
There is no particular risk in not having a security.txt file for your server. However, this file is important because it offers a designated channel for reporting vulnerabilities and security issues.

Recommendation:
We recommend you to implement the security.txt file according to the standard, in order to allow researchers or users report any security issues they find, improving the defensive mechanisms of your server.
